electrical current to be passed; and a hollow inner contour of the connecting bar, wherein a thickness of a cross-sectional surface of the connecting bar relates to the nominal current to be passed, wherein the connecting bar includes at least one bore for fastening purposes, wherein the at least one bore is threaded and wherein the connecting bar is open on the sides.

13. Amend claim 21 as below:

Claim 21. (Amended) A connecting bar for passing current between at least one electrical component of an electrical appliance or device and an external circuit, comprising: an outer contour of the connecting bar for accommodation through a window opening in a wall of the appliance or device, the outer contour being of a shape set irrespective of current to be passed, and a hollow inner contour of the connecting bar, wherein a cross-sectional surface of a thickness of the connecting bar is set relative to the current to be passed, wherein the connecting bar includes at least one bore for fastening purposes, wherein the at least one bore is threaded and wherein the connecting bar is open on the sides.
